Excel Canine is pleased to announce.

GAIT4DOGS® OBJECTIVE GAIT ANALYSIS IS HERE

Now Available in the Maritimes!

EARLY LAMENESS DETECTION

Paws Tell the Story

As simple as a few walks across the mat and the software gathers information about your dog's strides and pressure. Slight changes in stride or anomalies in paw strikes are picked up and you can avoid major injuries by being aware of soreness and staying ahead of any discomfort.

SORENESS ANSWERS

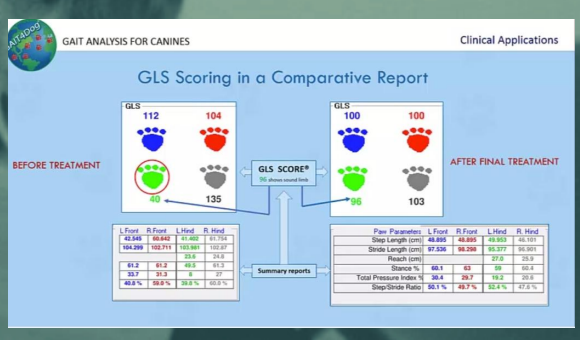
When you know something is wrong

The Gait4Dogs pressure walkway is an important diagnostic tool used by orthopedic veterinarians around the world. With more than 81 measurements like off-loading, swing time, etc. the software provides answers about where it hurts and how it hurts.

PROGRESSIVE DATA FOR REHAB

Easy to read reports

You will be provided with pdf reports and accompanying video that are generated with every visit you make and can be emailed to your vet or healthcare professional. The data helps you understand progress in rehab, what's working, and what's not, to help you help your dog heal as quickly as possible.



BOOKING FOR FALL 2020
